

ENERGY STAR Data Privacy and Security Policy

BOMA of Greater Phoenix maintains strict confidentiality and security of records of reported ENERGY STAR performance rating data. ENERGY STAR data is reported solely for the purpose of award qualification and judging for BOMA's *Kilowatt Krackdown* program and not for any other purpose. Reported data is never released to a third-party and data is securely maintained through a password protected database operated Dave Munn, co-chair of BOMA's Green Buildings Committee. The data of building type and rating score is reviewed on an aggregate level for the purposes of judging "best in category" and "most improved" performance.

The only data shared between Dave Munn and the GBC is the name of the building name, address, floor area, and whether it is the highest rated facility or the most-improved facility in the Kilowatt Krackdown Program.

A company or facility may be recognized as a program participant in promotional materials; however, no details other than facility name or address will be released. If you choose to opt out of any recognition, or have any questions regarding the data collection process, please notify BOMA of Greater Phoenix in written form to Dave Munn (dmunn@chelsea-grp.com).
